

## Firm Profile

We are a Philadelphia-based mechanical, electrical, plumbing, and fire protection engineering firm with project experience in pharmaceutical, health care, college & university, K-12, corporate, retail and luxury residential markets.

A principal-led firm, we take great pride in providing a unique, client-focused attitude in concert with a strong architectural eye leading to dynamic and cost-effective project results. We have found that by maintaining principal involvement through all project phases yields highly coordinated designs which minimizes problems during construction.

In addition to the standard MEP/FP consulting engineering services, we practice certain specialty engineering services. From sophisticated lighting design and custom 3-D animated renderings, which help the team and the client to visualize the architectural design, to computational fluid dynamic modeling for challenging ventilation requirements, we bring sophisticated analysis techniques to every situation.

Our company mantra, “Global thinking. Detailed attention.” accurately sums up our work ethic. We are well-versed in the masterplanning issues that often accompany major projects, but recognize that a successful project involves both the ability to conceptualize the work and the ability to execute it. We adeptly uses both broad and fine strokes to paint the perfect project picture.
